DETAILED ACTION

1. Regarding the status of the claims in the instant application, the Examiner has found a new prior art. The Examiner is obliged to apply the newly found prior art. The Examiner regrets the delayed process of the application. Accordingly, claims 1-32 are pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-32 are rejected under 35 U.S.C 102 (e) as being anticipated by Walker et al U.S. Pat. No. 6,163,771.

Claims 1-32 have been rejected under the newly found prior Walker. Walker discloses a mail-order based credit card fraud, both Visa and MasterCard have deployed databases that allow a merchant to verify that a given credit card account number is connected to a specific billing address. Visa calls this service the Address verification service. The theory behind the service is that a thief (for example, a dishonest restaurant waiter) might be able to use a credit card receipt slip to steal an active account number, but if he tries to use that number for a mail order purchase he would not know the correct

address associated with that number. Even if a thief were to obtain the cardholder's address, this service can allow a merchant to compare the shipping address of the catalog order to the current billing address for that account number and thus possibly identify any suspicious activity (which is readable as Applicant's claimed invention wherein said a method for detecting fraud non-personal transactions), comprising the steps of:

Collecting purchaser data for the transaction, said purchaser data comprising a billing address and a ship-to-address; transmitting said ship-to-address to a fraud-detection system, processing said ship-to-address to determine whether the transaction is potentially fraudulent by checking the purchaser's ship-to-address against criteria, and returning the relative risk of fraudulent activity associated with the transaction (see., col 2, lines 7-20).
